HEARTWORMS We are trying to get the word out via social media and our website about the importance of heartworm treatment. We often rescue dogs with heartworms which are spread through the bite of a mosquito that transmits infective larvae that develop into adult heartworms. If left untreated they can cause disease and organ damage. It's important that you get your dog tested for heartworms and give him/her heartworm preventative medications such as Heartgard, Trifexis, or Advantage Multi. Treatment options include slow kill and fast kill methods. Read more on our website at the link below and consult your veterinarian.

RECENT NEWS!

Our treasurer Debi reports that we have adopted out a total of 15 dogs in June, July and August. We continue to do adoptions successfully despite COVID -19 and get the word out through our website, Facebook, Instagram and Linked-In postings. We have picked up a couple more volunteers and are also getting more donations on a regular basis. Thank you! For those who are not on social media much, please check our website often for new dogs.

THANKS TO ALL OUR VOLUNTEERS, DONORS AND FOSTERS!

WE NEED MORE FOSTERS!

There are many ways you can help us including donations and volunteering to process applications or transport dogs. But our greatest need at the moment is **fostering**. Fostering is a big commitment but we desperately need more fosters which will allow us to rescue more dogs! We currently only have about 7 active fosters. That is not enough! Something new we are offering is a short-term foster (a few days to a few weeks) and long-term fosters (a few months or longer). You would need to have some experience and understanding of a dog's behavior especially if you currently own a dog. But you get the satisfaction of knowing you have helped a needy animal get ready for its forever home! Read more in a new document at website link below.
